# ATHENS *P*ROBABILITY COLLOQUIUM

Saturday May 9, 2015  
Math Dept, University of Athens

**"Group Walk Random Graphs"**

*Agelos Georgakopoulos*

**Abstract:** We introduce a model of "geometric" random graphs which is based on the behaviour of random walk on groups. Intricate connections to the Poisson boundary, effective conductance in electrical networks, and Sznitman's random interlacements will be discussed.
